Who we are?

DLabs is a company that provides Information and Communication Technology Services which was founded in 2023 by **Dhuta Pratama**.

In its development, DLabs continues to focus on technology development, its implementation in the market, and insights that provide benefits to both the private sector and government.

DLabs' vision is to develop and serve clients with commitment and focus on creating unique digital solutions. We not only believe this vision is a goal that we must achieve, but it is also visible in our ambition to become one of the most trusted Information and Communication Technology companies in Indonesia.

Founded

DLabs was founded in 2023 in Malang by Duta Pratama

2023

10+

Team

DLabs has 25 team members who have very high integrity

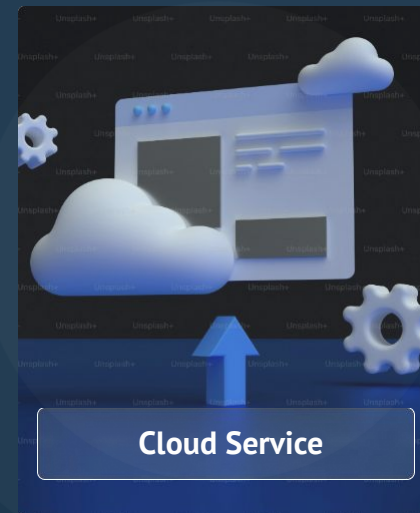

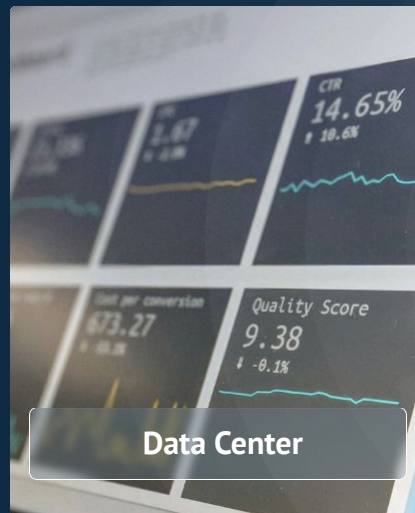

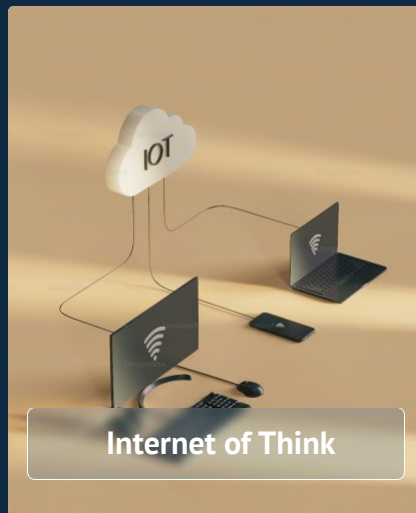

25

Customer Served

In total, more than 10 clients/projects have been completed by DLabs.

Our Mission

DLabs aims to contribute to the creation of new products in the SaaS, IoT, Cloud Service, and Datacenter lines. This is expected to have an impact on the expansion of data center tiers, currently concentrated in the capital region, by developing Cloud Services, leveraging potential projects for SaaS products, and integrating all services with IoT.

Our Target

DLabs has a grand vision to become an IT Research & Development laboratory and a Holding Company for several subsidiaries in the Software, Network, and Hardware sectors. The company has high expectations for mutual reinforcement among its subsidiaries.

Services

At PT. DLabs Indonesia Infotech, we not only offer services but also provide a profound experience and innovative solutions. With a dedication to quality and excellence, our team is committed to meeting your needs by delivering services that not only solve problems but also embrace new possibilities.

Software Development

Constructing and developing web-based applications, hosting, etc.

System Integration Building

Integrating cross-platform systems or applications to enhance system productivity.

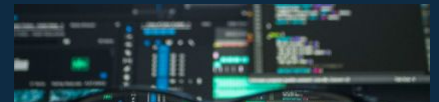

Management System

Managing and developing internal systems for more effective and efficient operations to satisfy clients.

Maintenance System

System maintenance for prevention and upkeep to address various challenges encountered by clients.

Competitive Advantage

Star Services Delivery

Clients/users are the most valuable component of our business, our service goal is client/user satisfaction.

Fully Integrated Service

By focusing on user interface and usability, utilizing multi-platform programming languages, and implementing a robust CI/CD (Continuous Integration/Continuous Deployment) process, our services are fully integrated to meet the needs and demands of our clients.

PT. Telekomunikasi Indonesia Internasional

About Project

Telin is a leading international telecommunications company with an extensive global reach. The company offers various telecommunications services and connectivity solutions for corporations and retailers. The challenge is the multitude of services that need to be incorporated into the website. In this project we already helped them to handle their myTelin dashboard, website revamp, also digital service order form platform

**Concrete Digital**

About Project

We are experimenting using webflow to revamp concreatdigital.co website. The owner approved this method because all the features that concrete digital got is same as the clients need. The approach that we used to the owner was approval the UI as usual, and then creating micro interactive. after all the design is approved, we going to developed the website on webflow platform.

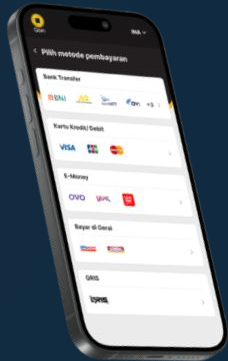

Heeler

About Project

Wordpress based website. in this case we was collaborating with concrete digital local agency from australia. we helped them to make sure heeler website is live and support them from UI development, server preparation, and website development.

QoinHub

About Project

QoinHub is a project by PT. Qoin Digital Indonesia that focuses on the security, data, and structure of Virtual Account (VA) and QRIS. Developed using Golang and Lets Framework, the interface adheres to BI and ASPI standards. The SNAP BI module has successfully managed B2B services and VA and QRIS transactions with banks through ATMs, Internet Banking, EDC, and Prima Network. After testing with banks such as Permata, Mandiri, BNI, BRI, Bank Artha Graha, and Yukk, this module is currently undergoing evaluation by ASPI and is expected to become the main PAYMENT GATEWAY module in QOINHUB after ASPI-BI licensing approval within 6 months.

Politeknik Kesehatan Malang

About Project

Since 2018, POLTEKKES Kemenkes Malang has aimed to have more students than the number of classes. To manage scheduling, the academic department used to rely on manual methods, such as pieces of paper and schedule worksheets. However, with a mobile application for students and a website for academics, the process of class scheduling requests and management can now be conducted online, saving both time and effort for both parties.
